

## Database Packages

Pricing for database packages is for the US by ZIP code OR census tract level for a single user. Data packages may also be purchased for one State or two States by ZIP code or census tract. To calculate a State price, multiply the below price by .25, if you'd like to purchase two States, the multiplier is .40.

Database	Description	Price
Estimates and Projections	Consists of approximately 300 variables for each of the Census 2000, current year estimates and 5-year projections databases. Population and household count variables for 10-year projections are also included. Variables in total are 902.	\$5,625
